

1    **ABSTRACT OF THE DISCLOSURE**

2            A scanner has a motor, a transmission gear set coupled with the motor, a contact  
3    image sensor and a belt connected between the transmission gear set and the contact  
4    image sensor. A sensing assembly has a casing adapted to be mounted on a side of a  
5    screen and a sensor securely received inside the casing to initiate the motor such that the  
6    contact image sensor is also driven to scan.
